INTELLIGENT MOTOR CONTROL

TRAINING EVENT

No matter what industry you are in, odds are that motors are used in some, if not most, of the processes. Other factors such as harmonics, safety, power management and remote monitoring/diagnostics can also influence your choices.

Please join us for an informative day of presentations and demonstrations covering Smart Contactors, Soft-Starters, Variable Frequency Drives, Servos Systems and Motor Control Centers. Understanding which solution will best fit your application and knowing the benefits, drawbacks and considerations of each method will help guide you in making those choices.

+ HANDS-ON

Throughout this course, you will have the opportunity to practice the skills you have learned through a variety of hands-on exercises.

COST

FREE
Includes lunch

REGISTER

To register, contact Ashli Anderson at aanderson@smcelectric.com by Wednesday, September 26.
