# INTELLIGENT MOTOR CONTROL TRAINING EVENT

No matter what industry you are in, odds are that motors are used in some, if not most, of the processes. Other factors such as harmonics, safety, power management and remote monitoring/diagnostics can also influence your choices.

Please join us for an informative day of presentations and demonstrations covering Smart Contactors, Soft-Starters, Variable Frequency Drives, Servos Systems and Motor Control Centers. Understanding which solution will best fit your application and knowing the benefits, drawbacks and considerations of each method will help guide you in making those choices.

 **COST**  
**FREE**  
Includes lunch

 **REGISTER**

To register, contact Suzan McPherson
